technical aspects of design thought. In an age of digital technologies, this work emphasizes the intimate relationship that exists between the drawing and its maker, the process between paper, hand, and mind." —LaRaine Papa Montgomery, Professor of Architecture/Graphics Coordinator, Savannah College of Art and Design "This book contains a wealth of information on architectural graphic communication. My students have found this to be an invaluable resource for graphic presentation techniques ranging from traditional hand drawing to advanced computer graphics. It features an amazingly wide range of examples including both student work and professional work by renowned architects. With the addition of a new chapter on portfolio design, this new edition illustrates the full gamut of graphic communication skills from

the conceptual sketch through the documentation of the final portfolio." —Mark A. Pearson, AIA, LEED AP, Associate Professor of Architecture, College of DuPage "This book should be in the library of all architecture and design students as well as practicing professionals. The richness and variety of hand-drawn and digital illustrations by students and architects offers deep insight into the many drawing types and methods used today. The section on portfolios is a helpful and timely addition." —Professor Michael Hagge, Chair, Department of Architecture, The University of Memphis

Some may call it the first manifesto of the twenty-first century,

for it lays down a new way to think about architecture. Others may think of it as the last architectural treatise, for it provides a discursive container for ideas that would otherwise be lost. Whatever genre it belongs to, SITELESS is a new kind of architecture book that seems to have come out of nowhere. Its author, a young French architect practicing in Tokyo, admits he "didn't do this out of reverence toward architecture, but rather out of a profound boredom with the discipline, as a sort of compulsive reaction." What would happen if architects liberated their minds from the constraints of site, program, and budget? he asks. The result is a book that is saturated with forms, and as free of words as any architecture book the MIT Press has ever published. The 1001 building forms in SITELESS include structural parasites, chain link towers, ball

bearing floors, corrugated corners, exponential balconies, radial facades, crawling frames, forensic housing--and other architectural ideas that may require construction techniques not yet developed and a relation to gravity not yet achieved. SITELESS presents an open-ended compendium of visual ideas for the architectural imagination to draw from. The forms, drawn freehand (to avoid software-specific shapes) but from a constant viewing angle, are presented twelve to a page, with no scale, order, or end to the series. After setting down 1001 forms in siteless conditions and embryonic stages, Blanciak takes one of the forms and performs a "scale test," showing what happens when one of these fantastic ideas is subjected to the actual constraints of a site in central Tokyo. The book ends by illustrating the potential of these

take readers on a tour of the best details designed by great architects around the world. The series provides a powerful presentation of the most challenging and evolving architectural and design categories. Small Environments focuses on the type of architectural details that make up distinctive residential spaces under 1,200 square feet (120 square meters). It presents recent work by architects from around the globe in color photographs and architectural drawings. Rather than simply another compendium of small projects, the book is structured according to categories of architectural detail. It includes sections on components essential to the design of small spaces, such as built-in pieces, mobile systems, storage, outdoor rooms, siting strategies, and daylighting details.

This practical foundation course in architectural design offers key advice on the principles, practice and techniques of the subject. Dealing with much more than just the technical aspects of drawing, it introduces the reader to the visual language of architecture, encouraging them to think spatially and question the built environment. All architecture students, and anyone interested in the creative side of architecture, will find this book an invaluable tool and reference.
