Who controls space? Powerful corporations, institutions, and individuals have great power to create physical and political space through income and influence. People’s Spaces attempts to understand the struggle between people and institutions in the spaces they make. Current literature on cities and planning often looks at popular resistance to institutional authority through open, mass-movement protest. These views overlook the fact that subaltern classes are not often afforded the luxury of open, organized political protest. People’s Spaces investigates individual’s diverse approaches in reconciling the difference between their spatial needs and spatial availability. Through case studies in Southeast Asia, India, Nepal, and Central Asia, the book explores how people accommodate their spatial needs for everyday activities and cultural practices within a larger abstract spatial context produced by the power-holders.

Peter Van Arsdale’s four decades of worldwide applied research and community outreach as a cultural anthropologist have involved water resource development, mental health, refugee resettlement, humanitarian assistance, and human rights. With one foot in the university, he always has kept the other foot in the field. In this brief, well-crafted volume, he synthesizes and grapples with key rights debates as well as human rights injustices on four continents. Thoughtful, original, and pragmatic, Van Arsdale opens with a “Tree of Rights” metaphor to demonstrate that rights are continually growing and evolving. From its branches come new rights, changes in the perception of rights, and the reframing of rights crossculturally. Following chapters focus on fundamental human rights: the right to clean water, sanitation, and food security; the right to be free from violence, genocide, and ethnic cleansing; and the right to dignity and respect. At-risk groups covered in the book include LGBT communities, children, refugees, and victims of war. Throughout, praxis—the meaningful intersection of theory, ethics, and practice—is emphasized. Chapter coverage is enhanced by complementary and compelling “Agency Action” and “Champion” sidebars. In closing, Van Arsdale challenges readers to embrace his “Theory of Obligation,” which maintains that one must assist those whose rights have been abused, when requested and when expertise and resources permit.

An in-depth look at the distinctly different ways that China and India govern their cities and how this impacts their residents Urbanization is rapidly overtaking China and India, the two most populous countries in the world. One-sixth of humanity now lives in either a Chinese or Indian city. This transformation has unleashed enormous pressures on land use, housing, and the environment. Despite the stakes, the workings of urban governance in China and India remain obscure and poorly understood. In this book, Xuefei Ren explores how China and India govern their cities and how their different styles of governance produce inequality and exclusion. Drawing upon historical-comparative analyses and extensive fieldwork (in Beijing, Guangzhou, Wukan, Delhi, Mumbai, and Kolkata), Ren investigates the ways that Chinese and Indian cities manage land acquisition, slum clearance, and air pollution. She discovers that the two countries address these issues through radically different approaches. In China, urban governance centers on territorial institutions, such as hukou and the cadre evaluation system. In India, urban governance centers on associational politics, encompassing contingent alliances formed among state actors, the private sector, and civil society groups. Ren traces the origins of territorial and associational forms of governance to late imperial China and precolonial India. She then shows how these forms have evolved to shape urban growth and residents’ struggles today. As the number of urban residents in China and India reaches beyond a billion, Governing the Urban in China and India makes clear that the development of cities in these two nations will have profound consequences well beyond their borders.

Through the analysis of Indian metropolises, this volume critiques the reality of “entrepreneurial governance” that has emerged as a major urban development practice in cities of the global south. In neoliberal India, the use of management rhetoric in urban development has rapidly led to the growth of urban/peri-urban structures and spaces that are supposedly “smart” and “entrepreneurial”, which are networked within global systems of production, finance, technology/ telecommunication, culture and politics. Through diverse empirical evidence from India, particularly from the metropolises of New Delhi, Mumbai, Bengaluru and Chennai, this volume focuses on the fallout of the deployment of “entrepreneurial governance” practices at national, state and local levels. Foremost, it explores the impact of specific institutional and organizational reorientations and changing urban spatial landscapes at the local level; secondly, it discusses the socio-economic implications of rollback of the state and involvement of non-state organizations in governance as part of urban entrepreneurialism; further, it discusses the regulation of urban development projects by local governments and the impact of "entrepreneurial governance" for citizens, often resulting in social exclusion and inequality. Finally, it explores the inherent contradictions within political and institutional landscapes that can be described as “entrepreneurial”. Written by scholars from diverse disciplinary backgrounds, and focusing on different facets of entrepreneurial governance in Indian metropolises, this book is of interest to researchers of urban politics, public policy, urban sociology, anthropology, urban geography, planning and architecture.

This book deals with slums as a specific question and a central focus in urban planning. It radically reverses the official version of the history of world cities as narrated during decades: slums are not at the margin of the contemporary process of urbanization; they are an integral part of it. Taking slums as its central focus and regarding them as symptomatic of the ongoing transformations of the city, the book moves to the very heart of the problem in urban planning. The book presents 16 case studies that form the basis for a theory of the slum and a concrete development manual for the slum. The interdisciplinary approach to analysing slums presented in this volume enables researchers to look at social and economic dimensions as well as at the constructive and spatial aspects of slums. Both at the scientific and the pedagogical level, it allows one to recognize the efforts of the slum’s residents, key players in the past, and present development of their neighborhoods, and to challenge public and private stakeholders on priorities decided in urban planning, and their mismatches when compared to the findings of experts and the demands of users. Whether one is a planner, an architect, a developer or simply an inhabitant of an emerging city, the presence of slums in one’s environment – at the same time central and nonetheless incongruous – makes a person ask questions. Today, it is out of the question to be satisfied with the assumption of the marginality of slums, or of the incongruous nature of their existence. Slums are now fully part of the urban landscape, contributing to the identity and the urbanism of cities and their stakeholders.

Seeing urban politics from the perspective of those who reside in slums offers an important dimension to the study of urbanism in the global South. Many people living in sub-standard conditions do not have their rights as urban citizens recognised and realise that they cannot rely on formal democratic channels or governance structures. Through in-depth case studies and comparative research, The Politics of Slums in the Global South: Urban Informality in Brazil, India, South Africa and Peru integrates conceptual discussions on urban political dynamics with empirical material from research undertaken in Rio de Janeiro, Delhi, Chennai, Cape Town, Durban and Lima. The chapters engage with the relevant literature and present empirical material on urban governance and cities in the South, housing policy for the urban poor, the politics of knowledge and social mobilisation. Recent theories on urban informality and subaltern urbanism are explored, and the issue of popular participation in public interventions is critically assessed. The book is aimed at a scholarly readership of postgraduate students and researchers in development studies, urban geography, political science, urban sociology and political geography. It is also of great value to urban decision-makers and practitioners.

In Hydraulic City Nikhil Anand explores the politics of Mumbai's water infrastructure to demonstrate how citizenship emerges through the continuous efforts to control, maintain, and manage the city's water. Through extensive ethnographic fieldwork in Mumbai's settlements, Anand found that Mumbai's water flows, not through a static collection of pipes and valves, but through a dynamic infrastructure built on the relations between residents, plumbers, politicians, engineers, and the 3,000 miles of pipe that bind them. In addition to distributing water, the public water network often reinforces social identities and the exclusion of marginalized groups, as only those actively recognized by city agencies receive legitimate water services. This form of recognition—what Anand calls "hydraulic citizenship"—is incremental, intermittent, and reversible. It provides residents an important access point through which they can make demands on the state for other public services such as sanitation and education. Tying the ways Mumbai's poorer residents are seen by the state to their historic, political, and material relations with water pipes, the book highlights the critical role infrastructures play in consolidating civic and social belonging in the city.
