The definitive guide to demystifying the venture capital business The Business of Venture Capital, Second Edition covers the entire spectrum of this field, from raising funds and structuring investments to assessing exit pathways. Written by a practitioner for practitioners, the book provides the necessary breadth and depth, simplifies the jargon, and balances the analytical logic with experiential wisdom. Starting with a Foreword by Mark Heesen, President, National Venture Capital Association (NVCA), this important guide includes insights and perspectives from leading experts. Covers the process of raising the venture fund, including identifying and assessing the Limited Partner universe; fund due-diligence criteria; and fund investment terms in Part One Discusses the investment process, including sourcing investment opportunities; conducting due diligence and negotiating investment terms; adding value as a board member; and exploring exit pathways in Part Two Offers insights, anecdotes, and wisdom from the experiences of best-in-class practitioners Includes interviews conducted by Leading Limited Partners/Fund-of-Funds with Credit Suisse, Top Tier Capital Partners, Grove Street Advisors, Rho Capital, Pension Fund Managers, and Family Office Managers Features the insights of over twenty-five leading venture capital practitioners, frequently featured on Forbes' Midas List of top venture capitalists Those aspiring to raise a fund, pursue a career in venture capital, or simply understand the art of investing can benefit from The Business of Venture Capital, Second Edition. The companion website offers various tools such as GP Fund Due Diligence Checklist, Investment Due Diligence Checklist, and more, as well as external links to industry white papers and other industry guidelines.

How can we use psychology and the behavioural sciences to aid law enforcement to better identify violent extremists? What can we learn from past attacks to ensure that our society is more prepared? How can societies deal with tension after these attacks?Violent extremists are evolving, constantly honing their strategies to out-manuever the 'good guys'. Faced with the quandary, challenges, and responsibilities of ensuring the safety of the society, practitioners and policymakers have to take decisive steps to respond and mitigate the impact of an attack. However, the daunting task of countering violent extremism is still plagued by the lack of basic understanding of the phenomenon.This book, Learning from Violent Extremist Attacks: Behavioural Sciences Insights for Practitioners and Policymakers, attempts to fill a gap in the extant literature by offering a behavioural sciences approach to integrate our understanding of the threat of violent extremism, with knowledge drawn from diverse fields, such as psychology, sociology, history, political science, technology, and communications to identify the lessons learned and provide scientifically defensible interventions and approaches for both the practitioners and policymakers.

Develop the effective, ethical and professional relationships and an honest and clear communication style that are the foundation of a successful bodywork practice. This practical, real-world, case-based approach to professional practice focuses on the communications and ethics essential to success in the field.

Understanding the Music Business offers students a current overview of the music business. Going beyond what most music business texts offer, Weismann delivers a contemporary approach that addresses the unanswered questions for today's music students, such as, "Is it really possible to make a living as musician?" Understanding the Music Business covers the basics in the first part of the text. This first section deals with the fundamentals of the industry, including recording, music publishing, agents, managers, radio and television, unions, the internet and new technology, and regional and international music markets. However, it is the second half of the text that breaks new ground by covering the career paths of new artists in the industry, the development and need for entrepreneurial skills, and the ways that individuals forge careers in the industry.

This issue of the International Journal of Business Anthropology contains seven articles including a special section of four papers from Japan with an editorial commentary. The editorial commentary briefly introduces business anthropology in Japan and the goals of editing a collection of articles from Japan. The first essay, "From 'Galapagos Syndrome' to Globalization: Japanese Businesses between Tradition and Virtual Reality" by Mary Reisel, presents the cultural factors that block traditional Japanese corporations from adapting faster to globalization, and explores the growing gap between them and the new virtual industries that are rapidly advancing. The second, "Variability of Boundary and Meaning of Diversity Attributes: Studies from Diversity Management at a Japanese SME" by Noriko Yagi, argues that an anthropological approach can contribute more to furthering understanding about the effect of diverse people working together in naturally occurring work groups. The third paper, "Creation of Corporate Identity: The Role of Rites and Symbol in Management" by Yi Zhu, examines by anthropological methods the ways in which a corporate entity's rites and symbols in management help construct a unique corporate identity, and the ways in which community members can cultivate a strong sense of belonging. The fourth article, "The New Business of Buddhism" by Yuko Nakamura, discusses the recent phenomenon of Japanese Buddhist organizations engaging in economic ventures such as restaurant businesses. The fifth essay, "Shared Business Culture Value: An Anthropological Study of the Endogenous Mechanism of Islamic Food Safety in China" by Shao-Hong Yong et al., proposes a conceptual model of a "Shared Business Culture Value" as the endogenous mechanism of Islamic food safety in China. The sixth paper, "Enterprise Anthropology: The Fourth Evolution of Anthropology" by Zhang Jijiao, regards the development of enterprise anthropology as the fourth evolution of anthropology. The final essay, "Resolving Conflict and Business Anthropology" by Alf H. Walle, argues that business anthropologists have unique skills for facilitating conflict resolution in many situations.

How do musical practices move? Though technology increasingly plays a great part in establishing different degrees of spatial proximity, music making still seems to be tied to specific geographical locations, cultures or communities. The identity of musical traditions, in particular, is often demarcated by a presumed degree of uniformity amongst its practitioners. Musical Mobilities analyses how a musical tradition moves literally and metaphorically: the ways in which people, objects and information travel across geographical locations, just as practices as recognisable entities circulate along with meanings, competencies and embodied dispositions. This unique ethnography focuses on son jarocho, a musical practice originating in southeast Mexico that is currently reproduced through transnational connections, particularly in the United States. Paradoxically, the transformation of son jarocho has been a noticeable outcome of its recuperation and preservation. Thus, in describing the moves of this musical tradition, this book provides a theoretical and empirical perspective on the dissonances between cultural continuity and change. The first ethnographic work to explicitly address the continuity and transformation of a musical

practice through the analysis of multiple forms of mobility and fixity, Musical Mobilities will appeal to undergraduate and postgraduate students and postdoctoral researchers interested in fields such as Latin American & Hispanic Studies, South American Music, Ethnomusicology, Cultural Studies and Sociology of Culture.

Events on Wall Street and Main Street reveal that some business leaders make dramatically unethical self-serving decisions that ignore the public interest. How can business schools educate future business leaders to make ethical decisions? Unfortunately, most business schools fail in teaching ethical decision-making. They erroneously assume that such decision-making is primarily conscious and reason-based, reflecting the western cultural orientation toward science and logic. In this book, Thomas Culham cites neurological findings showing that unconscious processes and emotions play a much more significant role than reason in making ethical decisions. Culham urges business schools to teach a modified form of emotional intelligence, linked with research-supported contemplative practices from the great meditative traditions. This book details the author's ethics curriculum and explains its successful application at the Sauder School of Business at the University of British Columbia. This fascinating, interdisciplinary, and highly practical curriculum integrates philosophy (virtue ethics), Daoist thinking, psychology, and neuroscience. This curriculum intends to transform the way business schools teach decision making. Such an effort might just transform the way we do business.

By the late nineteenth century advances in medical knowledge, technology and pharmaceuticals led to the development of a thriving commercial industry. Drawing on over 400 medical trade catalogues Jones presents a study of the changing nature of medical professionalism.
