Are people ready to take pivotal financial decisions like choosing a mortgage, saving for retirement, or investing their savings? How does the degree of knowledge about financial products and services affect the quality of their choices? Can financial fraud be prevented by increasing consumer financial knowledge? Financial Literacy in Europe addresses these important questions and more. In the first part, the author investigates the concept of financial literacy by analyzing its components and comparing different definitions from previous studies. This then forms a comprehensive measure of financial literacy to be applied in empirical studies that analyze the role of financial literacy in explaining consumers' financial behaviors. In the second part of the study, the author uses brand new data collected by the Consumer Finance Research Center (CFRC) from several European countries (the UK, Germany, France, Italy, Sweden, and Spain) to assess financial literacy in Europe and highlight similarities and differences across countries. Filling an important gap in previous research, the author develops a rigorous approach in the measurement of financial literacy in order to examine European financial literacy issues in great detail. This book, therefore, is a useful resource for assessing the effectiveness of single financial education programs or planning national strategies on financial education. It can also support policy makers in developing financial regulation and consumer protection strategies, considering the consumer perspective and their ability to deal with financial markets and institutions.

This contributed volume is devoted to the recent history and evolution of mathematics education in Eastern Europe, exploring how it was influenced by social and political changes in this part of the world. Despite the broad recognition of the importance of these changes, little scholarship exists that examines the ways in which they were followed by changes in the teaching of mathematics in the post-socialist countries. Indeed, the analyzed processes are complex and vary across the states. Accordingly, this book touches on many factors—including differences in cultures and traditions | that find expression in the teaching of mathematics. Specifically, this volume seeks to explore what changes there were in education in general and in the position of mathematics in school education in these years, and how these changes may be explained and documented; what changes there were in the content of mathematics education and its assessment, and how were they motivated and adopted; what new textbooks appeared and what new methodological ideas were offered in them; how and why mathematics teacher education and/or professional development changed; what was the role (if any) of foreign influences on mathematics education, etc. The book will be of interest to both researchers in mathematics education and practitioners-teachers, as well as a broader audience of historians and educators exploring the political aspects of education.
