When confronted with a fire protection problem, building management is often desperately short on information and know-how in this critical component of protection for their own facility. It is not that the material is hard to grasp, but that there is so much of it that makes the task seem so daunting. Touching on the many subfields of fire protection engineering, Fire Protection for Commercial Facilities deconstructs the issues of fire prevention and life safety into easily digested information. Written in a conversational tone that makes the concepts easy to understand, this book presents systems and practices that can increase a facility's ability to avoid fires, limit the development and spread of fires, and effectively control fires. It provides guidance for decision making regarding what can be effectively controlled in-house, and what should be contracted out to relieve the workload burden of the in-house staff. The information offered augments a broad range of expertise common to building or plant engineers, keeping them abreast of the divergent subfields of fire prevention. Every facility manager dreams of the day when absolutely nothing goes wrong, the week where no new unforeseen problems occur. A fire protection problem is just one of the many emergencies that might spoil this dream. Delineating current and time-tested fire protection practices, this book explores the wide array of fire protection engineering applications encountered during typical facility operations so that facilities managers can be well-versed, informed, and better able to handle fire-related incidents.

Fire extinguishers (built-in), Fire extinguishers, Firefighting equipment, Fire safety in buildings, Water, Mist, Fire sprinklers, Industrial facilities, Business facilities, Rooms, Religious facilities, Educational facilities, Health and welfare facilities, Institutional facilities, Museums, Office buildings, Restaurants, Nursing homes, Residential facilities, Corridors, Performance testing

Also included in the recommendations ws adherence to the 2012 IFC, listing marijuana production facilities as a contents risk on a CIKR chart/map, familiarization with State and County regulations regarding marijuana production facilities, enhanced training to help Lefthand FPD personnel recognize hazards and risks associated with these facilities, and adoption of a defensive operations policy for fires in these facilities.

The thirteenth of a well-received and highly acclaimed series on critical infrastructure, Commercial Facilities Protection and Homeland Security is intended to help law enforcement, security specialists, managers, and anyone involved in protecting infrastructure, handle the security threats that they deal with on a daily basis.

What are Mission Critical facilities? Mission Critical facilities must operate 8,760 hours per year without interruption. Because of my background in the Department of Defense (DoD), naturally I tend to think of mission critical facilities as those required by the military in support of the warfighter. Although most data centers are operated for commercial customers, increasingly the Department of Defense is beginning to contract for data center service from commercial suppliers and in many cases, DoD requires that the data center comply with Department of defense security requirements. That said, I will endeavor to include the requirements DoD expects so that your data center can meet those requirements should the need arise. For many years, NFPA 75 has been the standard of care for fire protection of IT equipment. DoD, GSA and VA design manuals and standards require the provisions of NFPA 75 be adhered to in full, with certain additional provisions. Compliance with NFPA 75 is rarely required by local building or fire codes but is routinely applied to IT equipment facilities on a prescriptive basis. A documented risk assessment is the basis for implementation of the standard for commercial facilities. Previously, NFPA 75-2013 contained statements that run counter to the 24x7 requirement for data centers such as Section 8.4.2.1, which stated "the power to all electronic equipment shall be disconnected upon activation of a gaseous-agent total flooding system..." The NFPA 75-2017 edition made significant changes to the minimum level of requirements to protect IT equipment from fire and the effects of fire. Topics covered include: Site Security Building Security Cyber-Security EMP Protection Insider Threat

Apply the experience of dozens of leading authorities with the new Organizing for Fire and Rescue Services. This special fire service edition of NFPA's Fire Protection Handbook is comprised of 35 informative chapters that present the big picture in a single volume. All the topics fire service managers and fire and life safety educators need to know about are here including: Fire and fire science basics including fire data collection and databases, and use of incident data and statistics Information on fire and life safety education including how to reach high-risk groups, understanding media, and evaluation techniques Guidance on fire department administration and operations, pre-incident planning, EMS, training, apparatus and equipment, PPE, managing response to haz-mat incidents, rescue operations, fireground operations, and more! Order your copy today and put time-tested knowledge to work for you!

In addition to architects, engineers, and design professionals, fire fighters also need to understand fire protection systems in order to manage the fire scene and minimize risks to life and property. Fire Protection Systems, Second Edition provides a comprehensive overview of the various types of fire protection systems, their operational abilities and characteristics, and their applications within various types of structures. The new Second Edition meets the latest course objectives from the Fire and Emergency Services Higher Education s (FESHE) Fire Protection Systems model curriculum and covers: Water supply basics, including sources, distribution networks, piping, and hydrants. Active fire protection systems and components, their operational characteristics, and installation, inspection, testing, and maintenance requirements. Passive fire protection systems such as firewalls, fire separation assemblies, and fire dampers Smoke control and management systems, gas-based suppression, access and egress control systems, and the code requirements for installation of these systems. Ensure that you are completely up-to-date on the latest fire protection systems and their operational characteristics and abilities with Fire Protection Systems, Second Edition."
