This book informs an international audience of teachers, scholars and policymakers about the development of learning progressions for primary and secondary geography education in various countries and regions of the world. The book represents an important contribution to learning progressions research and practice. The different chapters explore how curriculum standards and frameworks in different countries portray progress and sophistication in the learning of geography. The book compares educational systems and how teachers and curriculum developers use the concept of "learning progression" to guide educational practices. As an approach to educational research, learning progressions offer considerable potential for understanding how children develop understanding of geographic concepts and practices across grade bands and in relation to national geography standards. The book analyzes the general conditions of learning progressions within the context of a globalized world. Important themes are addressed such as: knowledge acquisition in formal education; measuring learning progressions in informal settings; learning progressions for one curriculum standard or several standards; conditions to assess progression in the learning of facts, concepts, and skills; and multiple pathways for understanding or learning geography. The contributing authors are experienced scientists in the field from all around the world giving specific insights into the practices of their countries. The book appeals to K-12 teachers, school administrators, policymakers, researchers in geography education, professors and lecturers at universities around the world.

ICSE Predictive Question Papers for 2014 as per the ICSE syllabus covering 5 subjects including Geography, English (Literature & Language), Hindi, Maths, History. Solutions are available online. Peterson's Private Secondary Schools 2014-15 is a valuable resource to help parents and students evaluate and choose from more than 1,100 schools in the United States, Canada, and throughout the world. Featured institutions include independent day schools, special-needs schools, and boarding schools-including junior boarding schools for middle school students. Profiles offer detailed information on areas of specialization, location/setting, affiliation, accreditation, tuition and aid availability, student body, faculty, academic programs, athletics, computers and campus technology, and admission information. Dozens of in-depth descriptions and displays offer photos of students and school campuses, as well as essential information to help parents find the right private secondary school for their child. Extra Summer Programs section offers additional details on fascinating summer opportunities at private secondary schools.

Sharpen sixth graders' critical-thinking skills with these brain-teasing activities. Parents, students,

and teachers will love these fun challenges, puzzles, and logical thinking pages. They're a great way to practice higher-order thinking skills.

IN QUESTO NUMERO Sirpa Tani, National cases, international collaboration - an example from Finland Joop van der Schee, Looking for an international strategy for geography education Andrea Favretto, Scale factor and image resolution: some cartographic considerations Judit Üt?-Visi, Educational landscape and possibilities - Geography education (in the light of a survey) Lorena Rocca, Cristina Minelle, Francesco Bussi, Building geographical knowledge together: the case of a Geography teaching on line course THE LANGUAGE OF IMAGES, Edited by Elisa Bignante and Marco Maggioli MAPPING SOCIETIES, Edited by Edoardo Boria TEACHING FROM THE PAST

This book highlights and examines the role of the textbook in legitimising established political and social orders. It analyses the way in which the 'other' is presented in school textbooks, focusing on a number of countries in the Middle East and North Africa (MENA) region, and argues that the role of textbooks in developing and maintaining a national identity should be afforded greater critical attention. Textbooks can help form national identities by developing a society's collective memory; this might involve a historical narrative which may be self-contradictory or even fabricated to a certain extent, including myths, symbols and collective memories that divide "us" from "them", and ultimately resulting a dichotomy between the Self and the Other. As well as addressing a range of theoretical questions relating to the study of textbooks generally, the volume also covers a broad spectrum of Middle Eastern states and societies, with contributions from Turkey, Iran, Egypt, Cyprus, Lebanon, Iraq, Kurdistan, Jordan, Morocco, Tunisia, Israel and Palestine. It will be essential reading for researchers and students working in the fields of Education, Sociology and History, particularly those with an interest in national identities in the MENA region.

Opportunities for developing innovative approaches in teaching and learning geography have been rapidly increasing in recent years. This is in part because of the spread of new technologies that allow access to geographic information and geographic geo-media resources. These new tools offer broad access to information and open data sources. They have revolutionised the way in which teachers of geography can work with pupils and students. "Education for Digital Earth" is now possible. As such, the exclusive use of traditional approaches to the teaching of geography is no longer reasonable today. The European Commission-funded network initiative, digital-earth.eu, promotes innovation and best practices in the implementation of geo-media as a digital learning environment for school learning and teaching. This book, supported by EUROGEO, analyses the main challenges facing geographical education - curriculum, methodology, teacher education and training and geospatial technologies - and illustrates different examples of the use of geoinformation in geographical education in several European countries.

The low demonstrable effect of education research done in South Africa in particular - and Africa in general - continues to be a problem in scientific records in the educational sciences. This scholarly collected work addresses this obstacle and focuses on recommendations from scholars in different sectorial categories in the field of education. Scholars from a variety of sub-fields within the educational sciences reflect on this particular matter, revisiting the history of research and research outcomes and offering informed recommendations based on in-depth investigation and analysis of aspects of the various discourses within the relevant sub-fields. The scope of the content of this collected work centres on the issue of the lack of scientific records concerning the scientific raising of the impact of education research. The book aims at making a specific contribution to the educational sciences by stimulating scholarly discussion around how to increase the recording of the significance of educational research done in Africa, and in South Africa in particular, and to redirect the research agenda into the direction of making more impact. Impact is conceptualised to mean both scholarly impact (that is being cited and being used as foundation for theory building and for further research) and practical impact (that is improvement of practice, teaching and learning in education institutions at all levels).

Debates in Geography Education encourages early career teachers, experienced teachers and teacher educators to engage with and reflect on key issues, concepts and debates. It aims to enable readers to reach their own informed judgements with deeper theoretical knowledge and understanding. The second edition is fully updated in light of the latest research, policy and practice in the field, as well as key changes to the curriculum and examination specifications. Expert contributors provide a range of perspectives on international, historical and policy contexts in order to deepen our understanding of significant debates in geography education. Key debates include: geography's identity as an academic discipline; what constitutes knowledge in geography; places and regional geography; what it means to think geographically; constructing the curriculum; how we link assessment to making progress in geography; the contribution of fieldwork and outdoor experiences; technology and the use of Geographical Information; school geography and employability; understanding the gap between school and university geography; evidence-based practice and research in geography education. The comprehensive, rigorous coverage of these key issues, together with carefully annotated selected further reading, will help support and shape further research and writing. Debates in Geography Education is a key resource that is essential reading for all teachers and researches who wish to extend their grasp of the place of geography in education. Mark Jones is Senior Lecturer in Education at the University of the West of England, Bristol, UK David Lambert is Professor of Geography Education at UCL Institute of Education, London, UK
