Graphic Design and Architecture, a 20th Century History: A ...
By definition, graphic design uses visual forms and elements of design to convey thoughts and ideas. It is a type of problem-solving, which is something it has in common with architecture. Design, in general, is about communication. Good design should captivate you and make you curious enough to question it further.

Graphic Design for Architects is a handbook of techniques, explanations and examples of graphic design most relevant to architects. The book covers a variety of scales of graphic design, everything from portfolio design and competition boards, to signage and building super-graphics - to address every phase of architectural production. This book combines and expands on information typically found in graphic design, information design, and architectural graphics books. As architectural

20th Century increases to include more territory and components of a project, it is important for designers to be knowledgeable about the various ways in which to communicate visually. For instance, signage should be designed as part of the process – not something added at the end of a project; and the portfolio is a manifestation of how the designer works, not just an application to sell a design sensibility. In thinking about architecture as a systematic and visual project, the graphic design techniques outlined in this book will help architects process, organize and structure their work through the lens of visual communication. Each chapter is titled and organized by common

architectural modes of communication and production. The chapters speak to architects by directly addressing projects and topics relevant to their work, while the information inside each chapter presents graphic design methods to achieve the architects' work. In this way, readers don't have to search through graphic design books to figure out what's relevant to them – this book provides a complete reference of graphic techniques and methods most useful to architects in getting their work done.

indications, plan grids, and site boundaries. The manuscript examines rendition of value and context and graphic symbols and lettering. Topics include tonal values, media and techniques, value/texture rendition, material rendition, shades and shadows, people, furniture, graphic representation symbols, and hand lettering. The text explores freehand drawing and architectural presentations, including freehand sketching, graphic diagraming, and sketching equipment. The publication is a valuable reference for architects interested in doing further studies in architectural graphics.

Storytelling In The Modern

No matter how carefully planned and designed our buildings, interior spaces and communities are, we are lost in them without architectural graphics to guide us. In fact, the most effective graphics are so closely associated with their environments that they become integral components. How varied, inventive and indispensable architectural graphics can be is splendidly illustrated in the work of Archigrafika, an award-winning graphic design firm in New York founded in 2009 by its creative director, Michael Gerbino. In the

pages of Graphics History A Architecture, a new, profusely illustrated, 240-page book published by Visual Profile Books, readers will be surprised by the countless ways the firm uses graphic design to create unique, attractive and vital settings for their clients as varied as Aon, Citibank, Pratt Institute, New York Foundling, Willis Towers Watson, St. Paul's Chapel and Green-Wood Cemetery. For example, Archigrafika and leading architects developed offices in eight cities for Willis Towers Watson, a global risk management insurance brokerage and advisory company, that joyously celebrated each location's history and culture, connecting its staff and

Viewing these and numerous other Archigrafika projects, readers may conclude

architectural graphics are functional works of art -- which they clearly are.

Graphic Design Theory is organized in three sections: "Creating the Field" traces the evolution of graphic design over the course of the early 1900s, including influential avant-garde ideas of futurism, constructivism, and the Bauhaus; "Building on Success" covers the mid- to late twentieth century and considers the International Style, modernism, and postmodernism; and "Mapping the Future" opens at the end of the last century and

includes current discussions on legibility, social responsibility, and new media. Striking color images illustrate each of the movements discussed and demonstrate the ongoing relationship between theory and practice. A brief commentary prefaces each text, providing a cultural and historical framework through which the work can be evaluated. Authors include such influential designers as Herbert Bayer, L'szlo Moholy-Nagy, Karl Gerstner, Katherine McCoy, Michael Rock, Lev Manovich, Ellen Lupton, and Lorraine Wild. Additional features include a timeline, glossary, and bibliography for further reading. A must-have survey for graduate and undergraduate courses in

For formulating graphics work-book problems around paraline construction the guide includes a notation system for describing an unlimited range of paraline-oblique drawings. A shortcut method for casting shadows in plan and elevation is useful for modeling shadows in architectural site plans and for obtaining fast design results. In addition there are eight different step-by-step procedures for setting up and constructing one and two-point perspective. Common-method perspectives are presented in the context of a drafting-board surface, and
