"Mid-nineteenth century Russian radicals who witnessed the Meiji Restoration saw it as the most sweeping revolution in recent history and the impetus for future global progress. Acting outside imperial encounters, they initiated underground transnational networks with Japan. Prominent intellectuals and cultural figures, from Peter Kropotkin and Lev Tolstoy to Saigo Takamori and Tokutomi Roka, pursued these unofficial relationships through correspondence, travel, and networking, despite diplomatic and military conflicts between their respective nations. Tracing these non-state networks, Anarchist Modernity uncovers a major current in Japanese intellectual and cultural life between 1860 and 1930 that might be described as "cooperatist anarchist modernity"—a commitment to realizing a modern society through mutual aid and voluntary activity, without the intervention of state governance. These efforts later crystallized into such movements as the Nonwar Movement, Esperantism, and the popularization of the natural sciences. Examining cooperatist anarchism as an intellectual foundation of modern Japan, Sho Konishi offers a new approach to Japanese history that fundamentally challenges the "logic" of Western modernity. It looks beyond this foundational construct of modern history writing to understand people, practices, and cultural expressions that have been forgotten or dismissed as products of anti-modern nativist counter urges against the West."

An ethnographic investigation into the dynamics between space and security in countries around the world It is difficult to imagine two contexts as different as a soccer stadium and a panic room. Yet, they both demonstrate dynamics of the interplay between security and space. This book focuses on the infrastructures of security, considering locations as varied as public entertainment venues to border walls to blast-proof bedrooms. Around the world, experts, organizations, and governments are managing societies in the name of security, while scholars and commentators are writing about surveillance, state violence, and new technologies. Yet in spite of the growing emphasis on security, few truly consider the spatial dimensions of security, and particularly how the relationship between space and security varies across cultures. This volume explores spaces of security not only by attending to how security is produced by and in spaces, but also by emphasizing the ways in which it is constructed in the contemporary landscape. The book explores diverse contexts ranging from biometrics in India to counterterrorism in East Africa to border security in Argentina. The ethnographic studies demonstrate the power of a spatial lens to highlight aspects of security that otherwise remain hidden, while also adding clarity to an elusive and dangerous way of managing the world.

Satellite Empire is an in-depth investigation of the political and social history of the area in southwestern Ukraine under Romanian occupation during World War II. Transnistria was the only occupied Soviet territory administered by a power other than Nazi Germany, a reward for Romanian participation in Operation Barbarossa. Vladimir Solonari's invaluable contribution to World War II history focuses on three main aspects of Romanian rule of Transnistria: with fascinating insights from recently opened archives, Solonari examines the conquest and delimitation of the region, the Romanian administration of the new territory, and how locals responded to the occupation. What did Romania want from the conquest? The first section of the book analyzes Romanian policy aims and its participation in the invasion of the USSR. Solonari then traces how Romanian administrators attempted, in contradictory and inconsistent ways, to make Transnistria "Romanian" and "civilized" while simultaneously using it as a dumping ground for 150,000 Jews and 20,000 Roma deported from a racially cleansed Romania. The author shows that the imperatives of total war eventually prioritized economic exploitation of the region over any other aims the Romanians may have had. In the final section, he uncovers local responses in terms of collaboration and resistance, in particular exploring relationships with the local Christian population, which initially welcomed the occupiers as liberators from Soviet oppression but eventually became hostile to them. Ever increasing hostility towards the occupying regime buoyed the numbers and efficacy of pro-Soviet resistance groups.

This book contains the best contributions presented during the 6th National Conference on Earthquake Engineering and the 2nd National Conference on Earthquake Engineering and Seismology - 6CNIS & 2CNISS, that took place on June 14-17, 2017 in Bucharest - Romania, at the Romanian Academy and Technical University of Civil Engineering of Bucharest. The sub-chapters consist of the best papers of 6CNIS & 2CNISS selected by the International Advisory and Scientific Committees. The book is targeted at researchers and experts in seismic hazard and risk, evaluation and rehabilitation of buildings and structures, insurers and re-insurers, and decision makers in the field of emergency situations and recovery activities.
