A guidebook to seducing, satisfying, and loving the only man you'll ever need In an act of generosity, Adrian Colesberry has written an exquisitely detailed guidebook to ensure that every reader knows precisely how to please him - in bed and beyond. Brimming with self-indulgent and incredibly bawdy humor, How to Make Love to Adrian Colesberry is a sexual memoir disguised as a manual on Colesberry's pet peeves, favorite positions, and surefire ways to turn on your man (aka Adrian Colesberry). Recounting dozens of annoying peccadilloes and helpful pro tips gleaned from his experiences with former lovers, Colesberry covers all corners to ensure that no stage of the court-and-conquer process is overlooked. Beginning with how to attract Colesberry, he later progresses to foreplay and finally the full monty, revealing his own erratic, often unerotic sexual history along the way. From his awkwardly celibate teenage years to the emotional scars inflicted by his domineering ex-wife, Colesberry muses on bondage, three-ways, toys, bi-curiosity, and other kinks. A pitch-perfect parody that spares no detail, How to

Make Love to Adrian Colesberry is a hilarious and filthy new entrant into the fratire genre.

Set amid the cornfields and keg parties of Jasper, a fictitious Midwestern college town, Deconstruction Acres depicts the struggles of Underdog, a townie, against his many enemies at Jasper College. In a story brimming with irony and humor, he competes with celebrity professor Race Fletcher, author of a book deconstructing the Green Acres TV show, for the affections of beautiful but haunted Ione Twayblade. He battles corrupt college president Milton Flaghorn, who governs Jasper College like a banana republic. He runs from sex-crazed Judy Blaine, who craves his attention while she stalks Ione. Through waging war against the hated college, Underdog discovers skills and talents he never knew he had.

Guidelines and Gamuts in Musculoskeletal Ultrasound edited by Rethy K. Chhem, M.D., Ph.D. and Etienne Cardinal, M.D. This practical guidebook provides an overview of the capability of musculoskeletal ultrasonography to assess disorders of the shoulder, elbow, wrist, hands, hip, knee, ankle, and foot. Each chapter provides a concise overview of anatomical structure, clinical indications, scanning techniques, and possible normal and abnormal findings. Guidelines and Gamuts in Musculoskeletal Ultrasound features a highly visual and easily accessible format that makes great use of tables, schematic diagrams, gamuts, and representative images. Individual chapters address such topics as: * Rotator and nonrotator cuff shoulder disorders * Disorders of the elbow, wrist, adult hip, knee, and ankle * Muscle and fascia * Bone * Soft tissue masses: an algorithmic approach * Soft tissue masses in pediatrics. Guidelines and Gamuts in Musculoskeletal Ultrasound is an indispensable reference for radiologists and orthopedists and will also be of interest to rheumatologists, physical therapists, and physicians in sports medicine.

This book constitutes the thoroughly refereed post-proceedings of the 14th Annual ERCIM International Workshop on Constraint Solving and Constraint Logic Programming, CSCLP 2009, held in Barcelona, Spain, in June 2009. The 9 revised full papers presented were carefully reviewed and selected for inclusion in this post-proceedings. The papers in this volume present original research results and applications of constraint solving and constraint logic programming in several domains. Among the issues addressed are solving argumentation frameworks, software consistency, modeling languages, static design routing, dynamic constraint satisfaction, and constraint-based modeling.

A 16-year-old boy who escapes a kidnapper thinks he can forget his trauma, but instead, he loses his grip on reality and believes he's part of an alternate world called Marbury. Sixteen-year-old Jack gets drunk and is in the wrong place at the wrong time. He is kidnapped. He escapes, narrowly. The only person he tells is his best friend, Conner. When they arrive in London as planned for summer break, a stranger hands Jack a pair of glasses. Through the lenses, he sees another world called Marbury. There is war in Marbury. It is a desolate and murderous place where Jack is responsible for the survival of two younger boys. Conner is there, too. But he's trying to kill them. Meanwhile, Jack is falling in love with an English girl, and afraid he's losing his mind. Andrew Smith has written his most beautiful and personal novel yet, as he explores the nightmarish outer limits of what trauma can do to our bodies and our minds. "An engrossing horror/fantasy hybrid...Nightmarish imagery is chillingly effective, and the pacing superbly builds suspense." -- Kirkus Reviews

DIVRichly detailed images of authentic shields, swords, crossbows, helmets, and ornate suits of body armor for knights and their steeds. Descriptive notes. 100 black-and-white illustrations. /div

The author of Eve's Rib takes a close up look at scientific efforts to understand and control human obesity, examining the pharmaceutical and weight control programs available, the history of obesity research, and the science of body weight, and arguing that the real problem with obesity is not losing the weight, but keeping it off.

Annotation This book constitutes the refereed proceedings of the Third International Conference on Algebraic Informatics, CAI 2009, held in Thessaloniki, Greece, in May 2009. The 16 full papers were carefully reviewed and selected from 25 submissions. The papers cover topics such as algebraic semantics on graph and trees, formal power series, syntactic objects, algebraic picture processing, finite and infinite computations, acceptors and transducers for strings, trees, graphs arrays, etc. decision problems, algebraic characterization of logical theories, process algebra, algebraic algorithms, algebraic coding theory, algebraic aspects of cryptography.

How do you make your way in a world that is changing at an unprecedented rate? Why do we have less and less time? Why are some people unfaithful? How can our government act against threats before they happen? This book is about change - from the small and seemingly insignificant transitions in our day-to-day lives, to the big and almost incomprehensible shifts in human history. Drawing on expert advice and often complex theories, the authors of the bestselling The Decision Book present fifty simple and effective models to help us make sense of change in our world. Change is happening all around us, in every sphere from the personal and political to economics and the environment. In The Change Book you'll find models explaining the financial crisis, why biotechnology is the industry of the future and why cities are the new nations. Whether you're buying a new car, deciding who to vote for, or making an investment, this little black book will offer surprisingly simple explanations of our complicated world - and radically challenge some of your preconceived ideas.
