Surgery theory, the basis for the classification theory of manifolds, is now about forty years old. The sixtieth birthday (on December 14, 1996) of C.T.C. Wall, a leading member of the subject's founding generation, led the editors of this volume to reflect on the extraordinary accomplishments of surgery theory as well as its current enormously varied interactions with algebra, analysis, and geometry. Workers in many of these areas have often lamented the lack of a single source surveying surgery theory and its applications. Because no one person could write such a survey, the editors asked a variety of experts to report on the areas of current interest. This is the second of two volumes resulting from that collective effort. It will be useful to topologists, to other interested researchers, and to advanced students. The topics covered include current applications of surgery, Wall's finiteness obstruction, algebraic surgery, automorphisms and embeddings of manifolds, surgery theoretic methods for the study of group actions and stratified spaces, metrics of positive scalar curvature, and surgery in dimension four. In addition to the editors, the contributors are S. Ferry, M. Weiss, B. Williams, T. Goodwillie, J. Klein, S. Weinberger, B. Hughes, S. Stolz, R. Kirby, L. Taylor, and F. Quinn.

This book provides a highly illustrated guide to the design, installation and maintenance of hot and cold water supply systems for domestic buildings. Based on British Standard BS 6700, the new edition takes into account revisions to the standard since the book was first published in 1991. It has also been updated to give guidance on the 1999 Water Supply Regulations and includes revisions to the Building Regulations. Written for designers and installers, this immensely practical book will also be of interest to technical staff of water undertakers, property services managers and students of NVQ and BTEch courses. It was specially commissioned by the British Standards Institution and written for BSI by Bob Garrett, formerly of Langley College of Further Education and past President of the National Association of Plumbing Teachers.

Rolfen's beautiful book on knots and links can be read by anyone, from beginner to expert, who wants to learn about knot theory. Beginners find an inviting introduction to the elements of topology, emphasizing the tools needed for understanding knots, the fundamental group and van Kampen's theorem, for example, which are then applied to concrete problems, such as computing knot groups. For experts, Rolfen explains advanced topics, such as the connections between knot theory and surgery and how they are useful to understanding three-manifolds. Besides providing a guide to understanding knot theory, the book offers 'practical' training. After reading it, you will be able to do many things: compute presentations of knot groups, Alexander polynomials, and other invariants; perform surgery on three-manifolds; and visualize knots and their complements. It is characterized by its hands-on approach and

emphasis on a visual, geometric understanding. Rolfsen offers invaluable insight and strikes a perfect balance between giving technical details and offering informal explanations. The illustrations are superb, and a wealth of examples are included. Now back in print by the AMS, the book is still a standard reference in knot theory. It is written in a remarkable style that makes it useful for both beginners and researchers. Particularly noteworthy is the table of knots and links at the end. This volume is an excellent introduction to the topic and is suitable as a textbook for a course in knot theory or 3-manifolds. Other key books of interest on this topic available from the AMS are ""The Shoelace Book: A Mathematical Guide to the Best (and Worst) Ways to Lace your Shoes"" and ""The Knot Book"".

Ever since its original publication in Germany in 1938, Max Schweidler's *Die Instandsetzung von Kupferstichen, Zeichnungen, Buchern usw.* has been recognized as a seminal modern text on the conservation and restoration of works on paper. This volume, based on the authoritative revised German edition of 1950, makes Schweidler's work available in English for the first time, in a meticulously edited and annotated scholarly edition. An extensively illustrated appendix presents case studies of eleven Old Master prints that were treated using the techniques Schweidler discusses.

Louise Poulson provide students with an eminently usable text. Although the theoretical underpinnings and conceptualizations of leadership issues invariably differ, this book provides a lucid guide to plumbing their ambiguities' - Educational Review `This is a book that should be regarded as essential reading for those students following courses in education and social policy, particularly as masters level '- International Journal of Educational Management `I bought this book just a few days ago and I was surprised to realise the simple and yet scientific way it is written! I have started my postgraduate studies in Educational Management and this book will definitely make things easier! I would like to cordially thank Professor Wallace and Mrs Louise Poulson for this book which will help the majority of the students who enter the "labyrinth" of postgraduate research and surely need a kind of instruction manual to start! ' - Amazon Review `One of the most useful books that I have come across for my students' - Professor Les Bell, Director of Doctorate of Education, University of Leicester `Very impressed with the first chapter. Have recommended it to our research department for use with our graduate students. Thorough and practical' - Philip Hallinger, Executive Director of the College of Management, Mahidol University, Thailand This unique book combines the teaching quality of a text with exemplary reports of small-scale and larger research studies, as well as a literature review by leading academics. Part One shows how to develop as a critical reader and self-critical writer of literature; and how to apply these insights in planning a written assignment, dissertation or thesis. The book provides a framework for the critical analysis of any text, and shows how to incorporate this in a literature review. Part Two presents accounts of leading-edge research, offering insights into key issues in the field of educational leadership, management and administration. The reader

is invited to practice literature review skills by applying the critical analysis questions to any research report. Readers can use the models of good research practice presented here in their own design of an investigation for a dissertation or thesis. Part Three shows how a high quality literature review may be constructed and addresses a key issue in the field.

Contributors include: · Sharon Kruse · Karen Seashore Louis · Kenneth Leithwood · Phillip Hallinger and Ronald Heck · Derek Glover and Rosalind Levacic · Ray Bolam This book will be useful to postgraduate students on research-based masters and doctorate courses in educational leadership, management and administration. It is relevant for students doing research training in the social sciences and humanities. It can also be used as a teaching resource by supervisors of masters and doctorate level students. This series, edited by Mike Wallace, supports research-based teaching on masters and taught doctorate courses in the humanities and social sciences fields of enquiry. Each book is a 'three in one' text designed to assist advanced course tutors and dissertation supervisors with key research-based teaching tasks and aims to:

- develop students' critical understanding of research literature
- increase students' appreciation of what can be achieved in small-scale investigations similar to those which they undertake for their dissertation
- present students with major findings, generalisations and concepts connected to their particular field.

Bringing together many results previously scattered throughout the research literature into a single framework, this work concentrates on the application of the author's algebraic theory of surgery to provide a unified treatment of the invariants of codimension 2 embeddings, generalizing the Alexander polynomials and Seifert forms of classical knot theory.

Product Dimensions: 9.7 x 6.6 x 2.1 inches The Handbook has been composed on the basis of processing, systematization, and classification of the results of a great number of investigations published at different time. The essential part of the book is the outcome of investigations carried out by the author. The present edition of this Handbook should assist in increasing the quality and efficiency of the design and usage of industrial power engineering and other constructions and also of the devices and apparatus through which liquids and gases move.
