Given this, organizations are able to easily adopt and manipulate these systems to meet their individual needs. Free and Open Source Enterprise Resource Planning: Systems and Strategies unites research on FOS-ERP, comparing differences with proprietary Enterprise Resource Planning products, and demonstrating key research factors. It includes cases demonstrating how small enterprises have benefited from FOS-ERP in Spain and in Belgium, along with difficulties encountered and solutions developed. This essential reference addresses key issues such as security and legal risks, as well as challenges, opportunities, and barriers to adoption.

In Unternehmen aller Art und Größe spielen betriebswirtschaftliche Anwendungssysteme oder Warenwirtschaftssysteme für die Bewältigung der aufkommenden Arbeiten eine zentrale Rolle. Für solche sogenannten ERP-Systeme (Enterprise Resource Planning Systeme) gibt es national und international eine Vielzahl an Anbietern. Eine ganz besondere Gruppe stellen die Open Source Systeme, also Systeme bei denen der Quelltext offen lesbar ist, dar. Diese besonderen Anwendungssysteme tauchen immer wieder aufgrund fehlender Lizenzkosten und absoluter Herstellerunabhängigkeit im zentralen Bewusstsein der IT-Entscheider auf. Um diesen Bereich objektiv zu durchleuchten wird in dieser Arbeit ein wissenschaftliches Konzept vorgestellt, das als Evaluationsschema die Anzahl der Systeme reduziert. Hierzu wird eine Methodik verwendet, die die Auswahl methodisch auf einige wenige Anbieter beschränkt. Insgesamt werden 85 Open Source ERP-Anbieter untersucht. Als Grundlage für die Evaluationen dienen dabei funktionale-technische und nichtfunktionale Anforderungen. Die funktional-technischen Anforderungen orientieren sich dabei an aktuellen Trends und Tendenzen moderner ERP-Systemanbieter auf Basis anderer wissenschaftlicher Ausarbeitungen und Studien. Nichtfunktionale Anforderungen dagegen werden in dieser Studie nach der gängigen ISO Norm zur Softwarequalität bestimmt. Zentraler Bestandteil der durchgeführten Evaluation ist dabei ein Anbieterverzeichnis, das im Laufe der Studie erstellt wurde. Dieses Verzeichnis enthält zusammenfassende lösungsneutrale Darstellungen und Informationen zu 38 aktuell relevanten Systemanbietern aus dem Bereich der Open Source ERP-Systeme. Demnach enthält es auch allgemeine, technische und funktionale Anforderungen und Trends. Die gewonnenen Informationen werden unter dem Aspekt der Leistungsfähigkeit und des Einsatzgebietes mit anderen wissenschaftlichen Arbeiten gegenübergestellt und verglichen. Auf diese Weise konnte ein praktischer

Nutzen dieser Systeme nachgewiesen und eine Empfehlung auf Basis entscheidender Gewichtungsfaktoren ermittelt werden.

Das Buch bietet einen umfassenden Überblick der am Markt angebotenen quelloffenen Unternehmenssoftware. Mit der praxisnahen Einführung in Open Source Unternehmenssoftware und dem enthaltenen Marktspiegel liefern die Autoren eine wertvolle Grundlage zur Softwareauswahl. Zum Hintergrund: Bei Open Source (OS) Software werden Software und zugehöriger Quellcode den Anwendern kostenlos bereitgestellt. Bei Infrastruktursoftware (z. B. Betriebssysteme, Firewalls usw.) ist OS Software bereits weit verbreitet und IT-Kosten können deutlich reduziert werden. Zunehmend wird auch OS Unternehmenssoftware angeboten. Diese ist ein idealer Ansatz zur Kostenminimierung im IT-Bereich. Dies gilt vor allem für Enterprise Resource Planning (ERP-) Systeme, Customer Relationship Management (CRM-) Systeme, Business Intelligence (BI-) Systeme, Business Process Modeling (BPM-) Systeme, Workflowmanagementsysteme und Projektmanagementsysteme. Noch ist die Durchdringung von OS Unternehmenssoftware in der betrieblichen Praxis gering. Ursache ist vor allem die Unübersichtlichkeit des Marktes. Hier schafft das Buch mit seiner Sammlung der derzeit am Markt angebotenen OS Enterprise Softwaresysteme Abhilfe.
