This book is our attempt to provide the readers with all the necessary information on how to set up the Java development environment and get started with client side, application development, using Java 7. In a step by step, easy to follow manner, the book takes one through application development. It assists in getting a good grip on the Java syntax and its methodologies to confidently craft robust applications using Java SE 7. It explores the Core of Java along with the improvements of Java SE 7, examines the various specifications and describes how to assemble them to develop applications with plenty of real world examples with complete code spec and diagrams to make it easier to follow. Whether you are a beginner or an experienced developer, you should find this book, a valuable and accessible knowledge base for crafting robust Java solutions. What will you learn from this book? Primer Of Java SE Introduction to Java, Setting up the development environment using JDK 7 Language Basics Fundamentals, Operators, Control Flow Statements, Iterations, Classes, Inheritance, Abstract Classes And Interfaces, Packages And Imports, Enumerations, Annotations, JavaBeans Components, Javadoc Java Utilities And The Collection Framework Arrays, Vectors, Collections, Generic Programming, ArrayList, LinkedList GUI Applets, Abstract Window Toolkit [AWT], Swing Event And Exception Handling Java DataBase Connectivity [JDBC] Networking And I/O Sockets And Network, Concurrency and Multithreading, Remote Method Invocation, Java I/O System Java Servlets Introduction, Writing the first Servlet XML And Java Java API For XML Processing [JAXP]: SAX & DOM, Streaming API For XML [StAX], Read RSS Feeds using StAX, Java Architecture For XML Binding [JAXB], XPath Interesting Features Autoboxing/Unboxing, Language support for collections, The diamond operator, Enhanced, for-each style for loop, Variable-length arguments [varargs], Static import, Underscores in numeric literals, Binary literals, Switch Case with Strings, Annotations on Java Types CD-ROM Contents Setup files for NetBeans IDE 6.9, MySQL 5.1, MySQL Connector/J 5.1, JDK 7 Source code for every example in this book. About the Authors The author Sharanam Shah [www.sharanamshah.com] has 8+ years of IT experience as a Developer, Database Designer, Technical Writer, Systems Analyst and a Lead Architect. He currently consults with several software houses in Mumbai, India, to help them design and manage database application. Vaishali Shah Their desire to share the knowledge they've acquired over all these years working together and perhaps partially to keep it available and alive made them co-author and publish several books, most of them tightly focused on commercial application development using software tools.

The book has been written to provide genuine domain knowledge to programmers who wish to learn web based, application development, using object oriented PHP 5.1 as the programming environment. IIS and Apache as the web servers of choice. With a clutch of DBMS as the data store underlay for the applications developed. All run on M.S. Windows and Linux. These are today's programming environments of choice.

This is highly user friendly book on Java programming. It covers the Java Platform Standard Edition 6 JDK. No knowledge of programming is assumed while writing this book. Anyone who knows how to operate the computer and has used at least one Windows based application like Word or Excel can read and understand this book. It strikes perfect balance between theory and practice. It can be used as text-book as well as reference book. Every chapter includes Drill Problems with Answers, Exercises, and Programming Problems. Starting from the basics of Java programming it covers the advanced

features like multithreading, graphic user interface, image processing, and computer book programming. Full Java compiler is given on the CD so that reader can immediately compile and execute the programs.

Genetic programming (GP) is a systematic, domain-independent method for getting computers to solve problems automatically starting from a high-level statement of what needs to be done. Using ideas from natural evolution, GP starts from an ooze of random computer programs, and progressively refines them through processes of mutation and sexual recombination, until high-fitness solutions emerge. All this without the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human-competitive results and applications, including novel scientific discoveries and patentable inventions. This unique overview of this exciting technique is written by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book.

Legendary leadership and elite performance expert Robin Sharma introduced The 5am Club concept over twenty years ago, based on a revolutionary morning routine that has helped his clients maximize their productivity, activate their best health and bulletproof their serenity in this age of overwhelming complexity. Now, in this life-changing book, handcrafted by the author over a rigorous four-year period, you will discover the early-rising habit that has helped so many accomplish epic results while upgrading their happiness, helpfulness and feelings of aliveness. Through an enchanting—and often amusing—story about two struggling strangers who meet an eccentric tycoon who becomes their secret mentor, The 5am Club will walk you through: How great geniuses, business titans and the world's wisest people start their mornings to produce astonishing achievements A little-known formula you can use instantly to wake up early feeling inspired, focused and flooded with a fiery drive to get the most out of each day A step-by-step method to protect the quietest hours of daybreak so you have time for exercise, self-renewal and personal growth A neuroscience-based practice proven to help make it easy to rise while most people are sleeping, giving you precious time for yourself to think, express your creativity and begin the day peacefully instead of being rushed "Insider-only" tactics to defend your gifts, talents and dreams against digital distraction and trivial diversions so you enjoy fortune, influence and a magnificent impact on the world Part manifesto for mastery, part playbook for genius-grade productivity and part companion for a life lived beautifully, The 5am Club is a work that will transform your life. Forever.

Feature Extraction for Image Processing and Computer Vision is an essential guide to the implementation of image processing and computer vision techniques, with tutorial introductions and sample code in MATLAB and Python. Algorithms are presented and fully explained to enable complete understanding of the methods and techniques demonstrated. As one reviewer noted, "The main strength of the proposed book is the link between theory and exemplar code of the algorithms." Essential background theory is carefully explained. This text gives students and researchers in image processing and computer vision a complete introduction to classic and state-of-the-art methods in feature extraction together with practical guidance on their implementation. The only text to concentrate on feature extraction with working implementation and worked through mathematical derivations and algorithmic methods A thorough overview of available feature extraction methods including essential background theory, shape methods, texture and deep learning Up to date coverage of interest point detection, feature extraction and description and image representation (including frequency domain and colour) Good balance between providing a mathematical background and practical implementation Detailed and explanatory of algorithms in MATLAB and Python

Media Studies.

Relates the incredible adventures of Professor William Waterman Sherman who in 1883 sets off in a balloon across the Pacific, survives the volcanic eruption of Krakatoa, and is eventually picked up in the Atlantic.

Translational Medicine: Tools and Techniques provides a standardized path from basic research to the clinic and brings together various policy and practice issues to simplify the broad interdisciplinary field. With discussions from academic and industry leaders at international institutions who have successfully implemented translational medicine techniques and tools in various settings, readers will be guided through implementation strategies relevant to their own needs and institutions. The book also addresses regulatory processes in USA, EU, Japan and China. By providing details on omics sciences techniques, biomarkers, data mining and management approaches, case reports from industry, and tools to assess the value of different technologies and techniques, this book is the first to provide a user-friendly go-to guide for key opinion leaders (KOLs), industry administrators, faculty members, clinicians, researchers, and students interested in translational medicine. Includes detailed and standardized information about the techniques and tools used in translational medicine Provides specific industry case scenarios Explains how to use translational medicine tools and techniques to plan and improve infrastructures and capabilities while reducing cost and optimizing resources

Investigating the complex interplay between tectonics and sedimentation is a key endeavor in modern earth science. Many of the world's leading researchers in this field have been brought together in this volume to provide concise overviews of the current state of the subject. The plate tectonic revolution of the 1960's provided the framework for detailed models on the structure of orogens and basins, summarized in a 1995 textbook edited by Busby and Ingersoll. Tectonics of Sedimentary Basins: Recent Advances focuses on key topics or areas where the greatest strides forward have been made, while also providing on-line access to the comprehensive 1995 book. Breakthroughs in new techniques are described in Section 1, including detrital zircon geochronology, cosmogenic nuclide dating, magnetostratigraphy, 3-D seismic, and basin modelling. Section 2 presents the new models for rift, post-rift, transtensional and strike slip basin settings. Section 3 addresses the latest ideas in convergent margin tectonics, including the sedimentary record of subduction initiation and subduction, flat-slab subduction, and arc-continent collision; it then moves inboard to forearc basins and intra-arc basins, and ends with a series of papers formed under compressional strain regimes, as well as post-orogenic intramontane basins. Section 4 examines the origin of plate interior basins, and the sedimentary record of supercontinent formation. This book is required reading for any advanced student or professional interested in sedimentology, plate tectonics, or petroleum geoscience. Additional resources for this book can be found at: www.wiley.com/go/busby/sedimentarybasins.
