Seminar paper from the year 2016 in the subject Agrarian Studies, grade: 4.4, , course: ANIMAL HUSBANDRY AND MANAGEMENT PRACTICES, language: English, abstract: This paper examines the various human and non-human factors endangering snail species' population, growth, development and reproduction both in the wild and under domestication; it also highlights the diseases affecting edible snails, conservation consciousness and preventive management practices to be adopted by snail farmers in West Africa in order to ensure the continued existence of these indigenous species with their enormous nutritional, health and economic benefit to mankind. In recent times, the wild snail species population in West Africa has witnessed a steady decline in its population and biodiversity attributed to the impact of human activities, predators, climatic factors and diseases. With the expected 30% rise in the world's population from 7.03 billion in 2010 to 9.14 billion in 2030, adequate measures should be taken and adopted to ensure the continued existence of these economic snails biodiversity in the ecosystem. Some of the unsupported snail hunting and population depleting behaviours of the farmers in the region are highlighted and corrected.

**DO YOU WANT TO LEARN HOW TO MAKE HUGE PROFITS FROM SNAILS?** In this well researched book, the author Professor Cordelia Ifeyinwa Ebenebe uses her vast experience to document years of studies about Snails and Snail Farming highlighting the pros and cons of such a venture. With the apparent inability of conventional animal protein sources to meet the animal protein requirements of Nigeria's fast growing population, there is need to utilize other non-conventional meat sources if Nigeria will attain self sufficiency in meat production. Snail is one of such alternative animal protein sources with unique potential for providing animal protein needs even for landless households in the community. Snail meat is not only rich in protein, but also minerals especially iron and calcium. It is also low in fat. This makes it a useful meat for people with fat related diseases such as high blood pressure, arteriosclerosis and obesity. Snail also has a lot of medicinal properties. Its high iron content is useful in treatment of anemic condition. The glandular substance in snail is used in treating a lot of ailments including whooping cough. Harnessing the usefulness of the snail as a meat animal, demands that snail rearing must go beyond the subsistence rearing system to commercial production scale found in Europe and most Asian countries. This book provides information on the snail biology and management techniques and therefore constitutes a veritable working tool for prospective snail farmers in achieving high margin profitability in snail enterprise.
