Sorvall Rc 5b

Research on the

microbial colonization
of the aerial and

subterranean tissues of

plants has shown an

extensive scale of

interactions between the

hosts and a range of

microbes, including

bacteria and fungi.

Intercellular spaces,

vascular systems and

even single cells can be

inhabited by these

Acces PDF Sorvall Rc 5b

endophytic microbes. Of the bacterial endophytes, only a small percentage is harmful to the plant; most are neutral, opportunistic or beneficial. These plant-based bacteria can have various important functions throughout the life cycle of the plant; some promote plant growth and

Acces PDF

Sorvall Rc 5b

development, others

protect the plant from

diseases. This ability to

be able to protect plants

from diseases has

catalyzed numerous

laboratories to search

for new bacteria that

could be utilized instead

of the traditional plant-

protective agents.

Because two or more

interacting organisms

are involved, research

Acces PDF

Sorvall Rc 5b

and the eventual

application of suitable
bio-controlling microbes

are challenging and
often require specific
skills and equipment.

The purpose of this
book is to provide a
comprehensive review
for those who are
interested in the
research and
biotechnological
applications of plant-

Acces PDF

Sorvall Rc 5b

associated bacteria. It also provides a compilation of current work conducted on plant-bacteria interactions.

Liposomes are cellular structures made up of lipid molecules.

Important as a cellular model in the study of basic biology liposomes

Acces PDF

Sorvall Rc 5b

are also used in clinical applications such as

drug delivery and virus studies. *Liposomes in

Immunology
