Readers gain a full understanding of today's digital world with the cohesive framework and logical organization found only in NEW PERSPECTIVES ON COMPUTER CONCEPTS 2016, ENHANCED, COMPREHENSIVE. This dynamic book provides the latest updates on emerging technology with engaging learning features, informative visuals and hands-on activities proven to increase learning effectiveness. An insightful introduction highlights today's digital evolution, while coverage of social media and online security examines concepts behind today's technology challenges and trends. Readers explore the principles underlying the wide scope of digital devices in use today with the book's unique focus on the connectivity that pervades modern life. This Enhanced Edition includes a new hands-on programming chapter that lets even readers with no prior coding experience learn to program with instant success using PythonTM. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Includes subject, agency, and budget indexes.

This monograph grew out of an effort to develop a new and comprehensive system for evaluation of teacher education programs at Ohio State University (OSU). The need for a more sophisticated evaluation system became apparent as it was noted that follow-up studies revealed that many graduates of the College of Education took their first jobs unequipped with many skills the curriculum was supposedly providing. Also, the system had no feedback loop which would enable the College to identify and correct student and program deficiencies. The

monograph provides an overview of the literature on teacher education evaluation systems, and describes issues at OSU that can be generalized to other institutions. Descriptions are provided of the student and program evaluation system that has emerged at OSU, including its conceptual base, the components of the system, and its implementation process. The instrumentation used in the program is presented, as well as analyses of data produced from the system. Discussions are included on the implications drawn from the findings of the system, the proposed next steps in the system's development, and the significance of such a system to the improved effectiveness of the teacher education enterprise. It is believed that this system is replicable in whole or in part in many other settings, and special care is taken to explain the rationale, to provide many examples of forms and materials used, and to document the implementation process at each step of the way. Appendixes present: a hypothetical individual profile; the Freshman Early Experiencing Program (FEEP) exploration profile, 1982-83; an analysis of teacher candidate profile ratings, 1982-83; a summary of findings from a follow-up questionnaire, 1982-83; and elements, activities, and strategies for implementing an evaluation system. (JD)

Information Systems Development: Reflections, Challenges and New Directions, is the collected proceedings of the 20th International Conference on Information Systems Development held in Edinburgh, Scotland, August 24 - 26, 2011. It follows in the tradition of previous conferences in the series in exploring the connections between industry, research and education. These proceedings represent ongoing reflections within the academic community on established information systems topics and emerging concepts, approaches and ideas. It is hoped that the papers herein contribute towards disseminating research and improving practice
