The study of the universe is called Cosmology, it is the physical investigation of the universe from the earliest forms during the Big Bang to today. It is a combination of physics and astrophysics directed at understanding the nature of the universe. The universe is something that is still a mystery to us, even after studying it for so long.

Jo Dunkley combines her expertise as an astrophysicist with her talents as a writer and teacher to present an elegant introduction to the structure, history, and enduring mysteries of the universe. Among the cutting-edge phenomena discussed are the accelerating expansion of the universe and the possibility that our universe is only one of many.

A student-active introduction to astronomy, emphasizing inquiry learning so students will clearly understand our universe and the scientific method. Within-text and end-of-chapter questions check understanding of concepts and require the student to think critically through astronomy-based problems. 'Nature of Science' and 'Detectives on the Case' sections in each chapter encourage students to take on the role of a scientist and so develop an understanding of how scientific progress is made, leading students through a chain of arguments of forming and testing hypotheses, in the context of specific astronomical topics. By focusing on key topics, the student is able to develop a deeper understanding of the core areas of astronomy. Math is used to make intuitive points and kept simple by using a two-track system to first describe the logic of the calculation followed by a more detailed example. Simple illustrations support the text and step students through concepts visually.

An astrophysicist presents an in-depth yet accessible tour of the universe for lay readers, while conveying the excitement of astronomy. How is a galaxy billions of lightyears away connected to us? Is our home nothing more than a tiny speck of blue in an ocean of night? In this exciting tour of a universe far larger than we can imagine, cosmologist Paul M. Sutter emphasizes how amazing it is that we are part of such a huge, complex, and mysterious place. Through metaphors and uncomplicated language, Sutter breathes life into the science of astrophysics, unveiling how particles, forces, and fields interplay to create the greatest of cosmic dramas. Touched with the author's characteristic breezy, conversational style--which has made him a breakout hit on venues such as The Weather Channel, the Science Channel, and his own popular Ask a Spaceman! podcast--he conveys the fun and wonder of delving deeply into

the physical processes of the natural universe. He weaves together the past and future histories of our universe with grounded descriptions of essential modern-day physics as well as speculations based on the latest research in cosmology. Topics include our place in the Milky Way galaxy; the cosmic web--a vast web-like pattern in which galaxies are arranged; the origins of our universe in the big bang; the mysteries of dark matter and dark energy; how science has dramatically changed our relationship to the cosmos; conjectures about the future of reality as we know it; and more. For anyone who has ever stared at the starry night sky and wondered how we humans on Earth fit into the big picture, this book is an essential roadmap.

Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Olli-Pekka Vainio, a leading expert in science and theology, explores questions concerning the place and significance of humans in the cosmos. Vainio introduces cosmology from a "state of the question" perspective, examining the history of the idea in dialogue with C. S. Lewis. This work, which is related to a NASA-funded project on astrobiology, ties into the ongoing debate on the relationship between Christian theism and scientific worldview and shows what the stakes are for religion and theology in the rise of modern science.

Start Your Journey to Master the Bible. The problem most of us have with the Bible is that we started out studying the details without ever getting the big picture. It's no wonder we're confused! In the Colorado Rockies, there are so many mountain peaks, nobody could climb them all. But there are 53 peaks that are over 14,000 feet. And many hikers try to climb all 53 fourteeners. That's what Max Anders does in this Bible study. You'll look at only the fourteeners – a manageable amount of information. In 30 days, you'll have a complete understanding of the story of the Bible and the core teachings or doctrines that Christians have held onto throughout the centuries, presented in bite-sized pieces. After you have mastered the fourteeners, you will have the basic information you need for hiking the smaller peaks. Anders' simple-to-use, straightforward guide has been recommended by Bible teachers and pastors for thirty years, and now he can join your Bible study and launch you on a journey of mastering the Bible so well that the Bible masters you. Sessions include: An Overview of the Bible The Early History of Israel (Patriarch–Kingdom Eras) The Later History of Israel (Exile–Silence Eras) The History of the Church (Gospel–Missions Eras) The Great Doctrines: the Bible, God, Christ, the Holy Spirit, and Angels The Great Doctrines: Man, Sin, Salvation, the Church, and Future Things Designed for use with 30 Days to Understanding the Bible Video Study (9780310112181), sold separately. Streaming video also available.
