Lifts, elevators and moving walkways/travelators covers specifications, analyses and designs of various types of lifts (elevators), escalators and travelators (moving walkways). It comprises of four sections starting with a general introduction to types of lifts, escalators and travelators. Section II deals with the planning, analysis and design of components or elements of lifts/elevators. Section III covers the analysis of structural elements of moving walks or travelators. Having given description in Section I, it was felt to give again a general introduction together with data on moving walks. Design analysis of the elements of escalators is introduced in section IV and is fully explained with design examples. The finite element technique forms a prominent part in this section. Section IV is entirely devoted to the design of elements forming escalators. The book has the flexibility to include additional analytical and design topics and case studies. This book can be used by engineers, technologists, specialists in lifts, escalators or moving walkways. The book is readily available for bureaus who are involve in computer aided works and finite element modeling of steel structures under static and dynamic loads. Civil/structural and mechanical engineers can take advantage of this text and can redesigned in their own installations and other structures. This book is also useful for post graduate mechanical, engineering courses.

This new edition of a one-of-a-kind handbook provides an essential updating to keep the book current with technology and practice. New coverage of topics such as machine-room-less systems and current operation and control procedures, ensures that this revision maintains its standing as the premier general reference on vertical transportation. A team of new contributors has been assembled to shepherd the book into this new edition and provide the expertise to keep it up to date in future editions. A new copublishing partnership with Elevator World Magazine ensures that the quality of the revision is kept at the highest level, enabled by Elevator World's Editor, Bob Caporale, joining George Strakosch as co-editor.

Phosphoric acid is an important industrial acid that is utilized for manufacturing phosphatic fertilizers and industrial products, for pickling and posterior treatment of steel surfaces to prevent corrosion, for ensuring appropriate paint adhesion, and for the food and beverages industry, e.g., cola-type drinks to impart taste and slight acidity and to avoid iron sedimentation. This industry is spread out in countries of four continents - Asia, Africa, America, and Europe - which operate mines and production plants and produce fertilizers. Phosacid is one of the most widely known acids. The global phosacid market and its many phosphate derivatives are expanding worldwide; this trend is expected to continue in the next years, thus producing innovative products.
