From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Whether it ' s practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle.

Throughout the world, healthcare professionals often lack knowledge of the possibilities and limitations of systematically processing data, information and knowledge and of the resulting impact on quality decision-making. They are often asked to use information technologies of which they have limited appreciation, in order to enhance their practices through better use of information resources. However, for systematically processing data, information and knowledge in medicine and in healthcare, healthcare professionals who are well-trained in medical informatics or health informatics are needed. It will only be through improved education of healthcare professionals and through an increase in the number of well-trained workers in health and medical informatics that this lack of knowledge and associated skills can begin to be reversed. Although we can recognize further progress in educating health and a considerable number of educational programs for health informatics / medical informatics specialists have been set up, there is still a need to enhance these educational activities world wide, considering global developments as well as new curricular concepts and technological opportunities. IMIA and in particular its working group on health and medical informatics education is the leading international society stimulating such educational activities in various ways. This book is especially helpful for educators in the field of health / medical informatics.
